3/20/06

Complete all sections. Use this form when transferring any real property that meets the definition of an establishment, as defined in section 22a-134(3) of the CGS. This form can also be used when transferring both real property and business operations simultaneously from "A" to "B". This form is appropriate when a discharge, spillage, uncontrolled loss, seepage or filtration of hazardous waste or a hazardous substance has occurred at the parcel or the environmental conditions at the parcel are unknown prior to the transfer. The person signing the certification agrees to investigate the parcel in accordance with prevailing standards and guidelines and to remediate the parcel in accordance with the remediation standards, Section 22a-133k and Section 22a-133q of the Regulations of Connecticut State Agencies (RCSA). **AN ENVIRONMENTAL CONDITION ASSESSMENT FORM (ECAf) MUST BE SUBMITTED SIMULTANEOUSLY WITH FORM III.**

Section A: General Establishment Information

1. EPA (RCRA) ID No.: CT N/A

2. Type of Transfer (be specific): **Transfer of real property**

3. Identification of Establishment (give name of business which exists/existed on-site)

Establishment Name: **T-Bar, Inc.**

Location: **141 Danbury Road**

Section B: Certification (This is the certifying party as defined in CGS Section 22a-134(6))

Description in Property Deed:

Recorded on page **0085** of volume **1255**, of the Town of **Wilton**
land records, as lot **2**, block **N/A** on map **70**

in the Tax Assessor's Office.

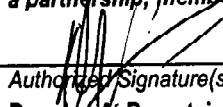

"As the certifying party, I certify that, to the extent necessary to minimize or mitigate a threat to human health and the environment, I agree to investigate the parcel in accordance with prevailing standards and guidelines and to remediate the parcel in accordance with the remediation standards. I agree to contain, remove, or abate pollution, potential sources of pollution and substances in soil or sediment which pose an unacceptable risk to human health or the environment."

"I have personally examined and am familiar with the information submitted in this document, and all attachments thereto, including inquiry of those individuals immediately responsible for obtaining such information, and certify that the submitted information is true, accurate and complete, to the best of my knowledge and belief. I am aware that if I knowingly submit false information or fail to comply with the provisions of CGS Sections 22a-134 to 22a-134e, I may be subject to damages and penalties pursuant to CGS Sections 22a-134(b and d) and an enforcement action pursuant to CGS Section 22a-134a(j). I further certify that I submitted this Form III to the transferee prior to the transfer of establishment."

"This Form III is complete and accurate as prescribed by the commissioner without alteration of the text."

This must be signed by an individual(s), if in such capacity; a responsible corporate officer; partner in a partnership; member of a LLC, as applicable.

RE: Schedule for Investigation and Remediation
Former T-Bar Incorporated
141 Danbury Road
Wilton, Connecticut

Dear Mr. Wilcox:

On behalf of All 4 Kids, LLC, owner of the above-referenced property, Leggette, Brashears & Graham, Inc. (LBG) is responding to Mr. Patrick Bowe's letter to Mr. Douglas Bernstein of All 4 Kids, LLC, dated June 5, 2006. According to the letter, the Connecticut Department of Environmental Protection (CTDEP) reviewed the Environmental Condition Assessment Form (ECAF) and determined that a Licensed Environmental Professional (LEP) may verify the site investigation and remediation.

All soil and ground water investigative information generated to date was included with the ECAF submitted to the CTDEP. In response to the requirement to provide a schedule for investigating and remediating the site, and for providing any required public notices prior to any remediation, the following schedule is outlined.

<u>Task</u>	<u>Date</u>
Submittal of ECAF and Form III	March 17, 2006
Receipt by LBG of CTDEP letter approving verification of site activities by an LEP	June 7, 2006
Complete site investigation and characterization activities	On or before June 7, 2008

Mr. Jeffrey Wilcox

-2-

June 23, 2006

Task (cont.)

Issue public notice of remediation and
provide copy to CTDEP

Initiate remedial actions

Date (cont.)

Three weeks prior to initiating
remedial actions

On or before June 7, 2009

Annual reports will be submitted to you in June of each year until the site meets the
criteria in the Remediation Standard Regulation.

The Licensed Environmental Professional that will oversee the activities at the property is
Mr. William K. Beckman, LEP No. 106.

Very truly yours,

LEGGETTE, BRASHEARS & GRAHAM, INC.

RE: Acknowledgement of receipt
of complete Form III and ECAF

Dear Mr. Beckman:

I am writing to acknowledge receipt of a Form III, fee payment in the amount of \$3,000.00 and Environmental Condition Assessment Form received on March 20, 2006. These documents were submitted pursuant to Connecticut General Statutes (CGS) 22a-134(a-e) regarding the March 10, 2006 transfer of real estate located at 141 Danbury Road in Wilton, Connecticut from Banks-Rau Realty, LLC to All 4 Kids, LLC, now or formerly known as T-Bar, Inc.

Within 45 days of the date of this letter, the Commissioner shall notify the certifying party in writing whether the Department's review and approval of the investigation and remediation of the parcel will be required, or whether an LEP may verify that the investigation has been performed in accordance with prevailing standards and guidelines and that the remediation of the parcel has been performed in accordance with the remediation standard regulations.

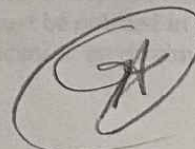

Should you have any questions, please feel free to contact me at (860)424-3788.

Sincerely,

Kim Maiorano

RE: Environmental Condition Assessment Form
T-Bar Incorporated, 141 Danbury Road in Wilton

Dear Mr. Bernstein:

On April 18, 2006, the Remediation Section of the Planning and Standards Division of the Department of Environmental Protection acknowledged receipt of an Environmental Condition Assessment Form (ECAF) for a parcel located on 141 Danbury Road in Wilton formerly known as T-Bar, Incorporated. The ECAF was submitted pursuant to Connecticut General Statute (CGS) 22a-134(a-e) regarding a Form III filing received on March 20, 2006 for the transfer of an establishment pursuant to Section 22a-134a(d) of the CGS. This parcel is recorded in the Stamford Tax Assessor's office as Map 127, Block 84, Lot 39.

This letter is to notify you that an environmental professional licensed pursuant to Section 22a-133v may verify that the investigation has been performed in accordance with prevailing standards and guidelines and that the remediation has been performed in accordance with the remediation standard regulations adopted by the Commissioner pursuant to Section 22a-133k. Upon your receipt of such verification by a licensed environmental professional, you must file a copy with the Commissioner.

Pursuant to Section 22a-134a(g), on or before 30 days of the receipt of this notice, you must submit to the Commissioner a schedule for investigating and remediating the establishment and for providing public notice prior to the remediation. Such schedule shall provide that the investigation be completed within two years of the date of receipt of this notice and that remediation be initiated within three years of the date of receipt of this notice. The schedule shall also provide that a copy of the public notice of remediation be submitted to the Department, and copies of technical plans and reports related to the investigation and remediation of the establishment be submitted to the Department on an annual basis. The schedule shall provide the name of the licensed environmental professional that will be retained to oversee such activities at the establishment. The Department must be notified in writing within 30 days should there be any change in the selection of the licensed environmental professional originally identified.

LEGGETTE, BRASHEARS & GRAHAM, INC.
PROFESSIONAL GROUND-WATER AND
ENVIRONMENTAL ENGINEERS

Letter to D. Bernstein
RE: T-Bar Incorporated
141 Danbury Road
Wilton, CT
Page 2

Unless an alternative schedule has been approved in writing by the Commissioner, you shall investigate the parcel and remediate the establishment in accordance with the proposed schedule. You shall submit to the Commissioner an independent verification by a licensed environmental professional that the establishment has been remediated in accordance with the remediation standards.

You should note that as provided under Section 22a-134a(g), the Commissioner may determine that the Commissioner's review and written approval of the investigation and remediation at the parcel is necessary. Nothing in this determination shall affect the authority of the Commissioner under any other statute or regulation, including, but not limited to, any authority to issue an order to any party associated with the transfer, to institute any other proceeding, or take any other action to prevent or abate pollution, to recover costs and natural resource damages, and to impose penalties for violations of law.

If at any time the Commissioner determines that the actions at the parcel have not fully characterized the extent and degree of pollution or have not successfully abated or prevented pollution, the Commissioner may institute any proceeding, or take any action to require further investigation or further action to prevent or abate pollution.

In addition, nothing in this determination shall relieve any person of his or her obligations under applicable federal, state and local law.

Please direct all future correspondence and any questions pertaining to this matter to Jeffrey Wilcox of my staff at (860) 424-3902.

Sincerely,

Patrick F. Bowe

RE: Determination of a Form III ECAF
Recommendation for LEP Verification

T-Bar, Inc. 141 Danbury Road in Wilton

XX

On April 18, 2006, the Department acknowledged receipt of an Environmental Condition Assessment Form (ECAF) and Form III received on March 20, 2006. The type of transfer is real estate. The transferor is Banks-Rau Realty, LLC in Maine and New York. The transferee and certifying party is All 4 Kids, LLC represented by Douglas A. Bernstein in Westport.

The 141 Danbury Road site is a 4.34 acre site is located on Route 7 adjacent to the Norwalk River. The site is in a GA resource served by the public water system. Industrial/commercial activities began at the site in 1963 and ended in 1992 when the building became office space. The building has been occupied by Angelique & Company, Inc. (1964); Electronics Control, Inc. (1964-1969); T-Bar, Inc. (1972-1988); Data Switch, Inc. (1989-1991); and Surgical Dynamics, Inc. (1992-1999). In general the companies manufactured and assembled electronic switching components and processes included vapor and dip degreasing. The two buildings represent a total of 80,000 square feet and are now vacant. The buildings have been served by natural gas since 1991 and tanks for diesel (generator) and heating oil have been removed. A former septic system with two dry wells was used until 1978 when the site was connected to city sewer system.

Remedial actions include the tank removal actions, a Phase I Assessment (12/1/2005) and Phase II Investigation (2/1/2006). Past investigations of the site have occurred between 1990 and 1995. The ECAF indicates six actual/potential release areas. There are 11 monitoring wells on the property and 11 rounds of testing of the groundwater. No non-aqueous phase liquid is present. The ECAF, from my review, shows that the maximum concentration of volatile organic compounds found in monitoring wells are at levels below established proposed residential volatilization criteria and surface water protection criteria. TCE is found in groundwater at a maximum of 5.6 µg/l, above the groundwater protection criteria of 5 µg/l.

Based on the ECAF:

1. Groundwater classification is GA
2. A substantial investigation of this establishment has been performed to date and the potential risk to public health and environment from these findings does not appear great.

The foregoing was subscribed to and sworn to before me this

by **Douglas A. Bernstein as Manager**
(Name of Signatory, Title and Company, if applicable)

day of **March**, 20 **06**,

who personally appeared, and that person, as such, satisfactorily proven to be authorized to do so, as certifying party, executed the foregoing instrument for the purposes therein contained.

Supreme E. Bucarese
Signature of Notary/Commissioner of Superior Court

My commission expires **11**

Name of Notary/Commissioner of Superior Court
(print or type)

Section C: Reason for Filing Form III

Indicate the reason why a Form III is being submitted:

Past land use activities qualify the property as an establishment and site characterization work completed to date indicates the subsequent characterization and some remediation is necessary to bring the property into compliance with applicable regulations.

Section D: Transferee Information (This pertains to transferee, must be completed, signed and notarized)

This document was received by me on **03/09/2006** as the Transferee.

This must be signed by an individual(s), if in such capacity; a responsible corporate officer; partner in a partnership; member of a LLC, as applicable.

Authorized Signature(s) for Transferee

Douglas A. Bernstein

Name of Person Signing (print or type)

Manager

Part II: Site History, Waste Management History

1. Summary of industrial/commercial history of site (present and former use, including dates and SIC codes):
See Addendum

2. Hazardous substances or petroleum products presently or formerly handled at the site (list materials & management method):
See Addendum

3. RCRA Notifier Status: See Addendum RCRA Permit Status: ☐ Yes ☒ No

4. Has any enforcement action been taken by CT DEP or EPA regarding waste handling practices at the site, or requiring remediation at the site? ☒ Yes ☐ No

If yes, list action type, date, number, name of party, purpose & status:

April 1985 Notice of Violation (NOV), T-Bar, improper hazardous waste handling, storage and management practices.

5. Releases reported to CT DEP Oil & Chemical Spills? ☐ Yes ☒ No

If yes, list date, material released and quantity:

6. Previous Form filings with CT DEP Property Transfer Program? ☐ Yes ☒ No

If yes, list form & date:

7. CT DEP staff involved with assessment or remediation of the site:

None

PHASE I ESA

PHASE II SI

Part II: Site History, Waste Management History (cont.)

8. a. List any release areas or potential release areas on the site, and for each describe the nature of the release, the date and estimated duration of the release, and an estimated volume of the release. For each release area or potential release area indicate whether the area has been investigated or remediated.

See Addendum

- b. Specify which release areas are not included under the certification to remediate releases at the establishment being transferred, if applicable.

All release areas are included.

Part III: Environmental Setting

1. Ground Water

Ground-water classification: GA

- a. Is the ground water on the site used for: N/A

☐ drinking water

☐ agricultural uses

☐ industrial purposes

- b. What is the distance from the site to the nearest off-site well, other than a monitoring well?

7.5 miles to nearest public supply well

- c. Is the site within the zone of contribution of a public water supply well? ☐ Yes ☒ No

2. Surface Water

Surface-water classification: B

- a. Identify the nearest down-gradient surface-water body: Norwalk River

- b. What is the distance from site to the nearest surface water: 0 (river is along western property line)

3. Public Utilities

- a. Is public water provided to the site? ☒ Yes ☐ No

Is public water unavailable to any developed area surrounding the site? ☐ Yes ☒ No

- b. Is the site connected to municipal sewers? ☒ Yes ☐ No

- c. Are or have on-site septic system(s) been used at the site? ☒ Yes ☐ No

If yes, dates in use: 1963 to 1978

4. Describe the land use on the site and in the area surrounding the site. Identify any sensitive land uses within 1/2 mile of the site?

See Addendum

PHASE I ESA

PHASE II SI

Part III: Environmental Setting (cont.)

5. Provide a brief geologic and hydrogeologic summary of the site and surrounding area:
See Addendum

Part IV: Environmental Assessment

1. Field investigation/ Environmental Assessment:
 - a. Date(s) performed: Phase 1: 12/1/2005 Phase 2: 2/1/2006 Phase 3: / /
 - b. Potential release areas (#): Identified: 6 Tested: 6 Release detected: 2
2. Soil Investigation:
 - a. How many of soil samples were screened/analyzed?
Waste 0/0 Shallow soil 19/16 Soil >2' deep 81/25
 - b. What techniques were used to investigate soil?
☒ Soil gas survey Other surveys (specify):
Subsurface sampling techniques (specify): geoprobe
3. Ground Water Investigation:
 - a. How many samples of ground water and how many rounds of sampling were used in the investigation? See Addendum
 - b. How many monitoring wells were used to investigate the ground water?
For each well list the well number, type of well, and geologic unit that the well is screened in or open to. Use an addendum sheet, if necessary. (Refer to instructions)
See Addendum
 - c. How many other types of wells were used? Provide the type and address for each well.
None
 - d. Is the extent of each ground-water plume resulting from releases at the site fully characterized?
☒ Yes ☐ No
 - e. What techniques were used to investigate the ground water?
☒ Ground water quality testing ☐ Pump testing ☐ Geophysical logging
Other techniques (specify):
4. Indicate phases of environmental assessment completed to date:
☒ Investigation ☐ Remedial design ☐ Remediation ☐ Post-remedial Monitoring

Part V: Contaminants in the Environment

1. Contaminated Soil or Wastes on the Site - List the contaminant codes for substances detected in waste or soil on the site and for each contaminant the highest concentration detected: (Note where not applicable "NA" or not tested "NT")

- a. Waste or waste residue: NA
- b. Soil: See Addendum

2. Contaminated Ground Water Resulting from Releases on the Site - List the contaminant codes for substances detected in ground water and for each contaminant the highest concentration detected: (Note where not applicable "NA" or not tested "NT")

- a. Ground water in overburden on-site: See Addendum
- b. Ground water in overburden off-site: N/T
- c. Ground water in bedrock on site: NA/NT
- d. Ground water in bedrock off-site: NA/NT

3. Contaminated Surface Water Resulting from Releases on the Site - List the number of surface water samples taken; contaminant codes for substances detected resulting from releases on the site; and for each contaminant the highest concentration detected.

LBG has no knowledge of any surface water samples being collected. The Norwalk River has a surface water classification of B. The Norwalk River is already an impaired surface water body and with the building being vacant since 1999 - with manufacturing stopping by 1991 at the latest, LBG does not deem a surface water sample to be necessary at this time given the soil and ground-water results from January 2006.

4. Non-Aqueous Phase Liquids (NAPL) - Describe whether NAPLs resulting from a release at the site are present or potentially present in the following settings:

- a. Are NAPLs present in the unsaturated zone? ☐ Yes ☒ No ☐ Potentially

Product(s):

- b. Are NAPLs present in unconsolidated material below the water table?

☐ Yes ☒ No ☐ Potentially

Product(s):

- c. Are NAPLs present in the bedrock below the water table?

☐ Yes ☒ No ☐ Potentially

Product(s):

5. Briefly describe the extent and distribution of contaminated soil/waste, ground water, surface water and/or NAPLs resulting from releases on the site. If applicable, specify which contaminants are not subject to the certification to remediate releases at the establishment being transferred.

See Addendum

Part V: Contaminants in the Environment (cont.)

6. List for each release area the codes for contaminants of concern, and for each contaminant the following: the number of samples in which the contaminant was detected; the maximum and typical concentrations of the contaminant; and depth at which the maximum concentration was detected: Enter a check if an addendum table is used. ☒

Provide site name, address and town from Part I, Item 1:

Name of site: 141 Danbury Road

Street Address or Description of Location: 141 Danbury Road

City/Town: Wilton

State: CT

Zip Code: 06897-

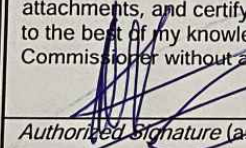

Release Area	Contaminants of concern tested	Contaminants in soil/waste	Contaminants in ground water	Contaminants in surface water

Part VI: Supporting Documents (see instructions for details)

1. ☒ Site Map attached	Latitude & Longitude (d/m/s):	N: 41/10/49	W: 73/24/58
2. Enter a check mark for features included on Site Plans:		Number of sheets attached:	
☒ structures/boundaries	☒ potential release areas	☐ areas remediated	
☐ material management areas	☒ sampling locations	☒ water table elevations	
☐ waste management areas	☒ monitoring wells	☐ limits of ground-water plume	
☒ UST and AST locations	☐ release areas	☒ topography/drainage	
3. Site Size: Acres: 4.34		Acres undeveloped: 0	
% impervious: 55%		Building sq. footage: 33,648 and 47,040	
4. This assessment is based on the following reports (title; date; consultant): <i>Make note of whether the report is on file with DEP - ""</i> . Note by using "+" if report is attached. See Addendum			

Part VII: Certification

"I have personally examined and am familiar with the information submitted in this document and all attachments, and certify that based on reasonable investigation the submitted information is true and accurate to the best of my knowledge and belief. I certify that this form is complete and accurate as prescribed by the Commissioner without alteration of the text."

**ADDENDUM FOR ECAF
141 DANBURY ROAD
WILTON, CONNECTICUT**

PART II.1 Summary of industrial/commercial history of site (present and former use, including dates and SIC codes):

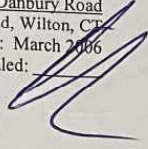

Prior to the current site building being constructed in circa 1963, the site was used for residential purposes (Gorham Farm, presumed SIC code 0291). Angelique & Company occupied the facility from the time the building was constructed to 1964. The nature of operations by Angelique & Company is not known. From 1964 to 1969, Electronics Control, Inc. occupied the facility. Historic operations and details about the operations of Electronic Controls, Inc. during this period are not known. T-Bar, Inc. occupied the facility from 1972 to 1988. GZA completed a Phase I Environmental Site Assessment (ESA) of the property in May 2005. The GZA Phase I ESA report stated that T-Bar, Inc. manufactured electronic switching components and conducted assembly, vapor degreasing and foam packing at the property. Reportedly, the foam packing that took place onsite was done with InstaPak, which was described as "generated by combining polymeric isocyanate and urethane foam resin". Additional chemicals and solvents used on-site during these manufacturing processes included TMS Freon and TCA (used as a dip degreaser, (presumed SIC code 3643). Data Switch, Inc. occupied the facility from 1989 to 1991. Not much is known about the activities of Data Switch, Inc., however, it is believed they conducted similar manufacturing as the previous tenant, T-Bar, Inc. U.S. Surgical Corporation (a.k.a. Surgical Dynamics, Inc.) occupied the facility for office use only from 1992 to 1999. No manufacturing took place during this time period. From 1999 to the present, the building has been vacant. Priceline.com leased the space from 2001 to 2004, however, they never occupied the facility.

PART II.2 Hazardous substances or petroleum products presently or formerly handled at the site (list materials & management method):

A list of typical chemicals used at the former T-Bar, Inc. facility for the former switch manufacturing process is summarized below. This information was obtained from waste disposal manifests that were on file for the period of November 1984 to August 1987. One 4,000-gallon underground storage tank (UST) was installed during the building construction in 1963 to store fuel oil. This UST was used to fuel the heating system prior to 1991 when the facility was connected to natural gas. From 1991 to January 12, 1999, this 4,000-gallon UST was connected to a back-up generator and believed to store diesel fuel. In January 1999, Absolute Tank Removal removed the 4,000-gallon UST and collected two (2) bottom samples from the tank grave. Soil

WILTON, CONNECTICUT**

borings were drilled under LBG's supervision around and in the former tank grave area on January 12, 2006 to complete closure sampling.

waste chlorinated fluorocarbons
waste oil
hazardous waste liquid (unspecified)
waste isopropanol flammable liquid
waste 1,1,1-trichloroethane
waste isopropanol flammable liquid
hazardous waste liquid freon mixed with oil

PART II.3 RCRA Notifier Status:

The site is currently vacant. A former tenant, T-Bar, Inc., had an EPA RCRA SQG ID number for and operated at the property during 1972 to 1988. T-Bar Inc. discontinued operations at the site in 1988.

Part II.8.a. List any release areas or potential release areas on the site, and for each describe the nature of the release, the date and estimated duration of the release, and an estimated volume of the release. For each release area or potential release area indicate whether the area has been investigated or remediated.

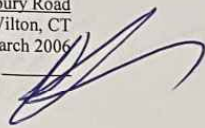

Six (6) areas of concern (AOC) were identified at the site by LBG during completion of a Phase I ESA in February 2006. Each AOC has been investigated and a Phase II Site Investigation report has been prepared. Details of the AOCs and the investigations associated with the AOCs are described in the attached reports. A summary of each AOC is discussed below.

AOC 1: Exterior Doors

The exterior doors of the facility that may have been near the former manufacturing areas were identified as an AOC. LBG collected three (3) shallow soil samples (SS-1, SS-2 and SS-7, figure 2) to 0.5 feet below grade to determine if there had been any historic releases. These soil samples were analyzed for SVOCs PAHs only, VOCs and ETPH. Several SVOCs and ETPH were detected but at concentrations below applicable standards. A significant release did not occur at this AOC and further investigation/remediation is not anticipated.

AOC 2: The Loading Dock:

One soil boring (SS-8, figure 2) was drilled under the supervision of LBG on January 12, 2006. One soil sample was collected and submitted for analysis of VOCs,

Site Name: 141 Danbury Road
Location: 141 Danbury Road, Wilton, CT
Date: March 2006
Initialed: 

**ADDENDUM FOR ECAF
141 DANBURY ROAD
WILTON, CONNECTICUT**

SVOCs PAHs only, and CTETPH. This sample was collected from two to four feet below grade to determine if any releases could have occurred in the location where materials were formerly handled. None of the target parameters were detected. No releases occurred in this AOC and further investigation/remediation is not anticipated.

AOC 3: Sub-Floor Conditions:

To check for residual subsurface impacts under the building from the former manufacturing activities that were conducted in the building, five sampling locations were established in the building as indicated on figure 2. At each location, a small hole was drilled through the concrete slab floor, through which a soil sample was then collected just below the slab with a small hand auger. Soil samples were collected at locations SV-1, SV-2, SV-3, and SV-4, but could not be collected at SV-5 due to the thickness of the slab and the nature of the subsurface soil. After the soil sample was collected at each location, a soil-vapor sample was collected in a suma canister. Soil-vapor samples were collected from all five locations.

The soil samples were analyzed for VOCs, SVOCs and ETPH, recognizing they would need to be close to a release location in order to detect the release. Specific locations of manufacturing activities and chemical use were not able to be defined during the Phase I ESA. Therefore, the interior sampling locations were distributed throughout the building. In contrast, soil-vapor samples are useful for detecting releases of VOCs from over a larger area because of the ability of the vapor to move through the soil under the concrete slab. As such, the soil-vapor samples were analyzed for VOCs. Because of the low volatility of SVOCs and ETPH, these types of compounds are generally not found in soil vapor and, therefore, the vapor samples were not analyzed for these compounds.

Seven VOCs were detected in the soil vapor samples, whereas no VOCs were detected in the soil samples. One soil sample (SV-2) contained low concentrations of SVOCs and two samples contained low concentrations of ETPH; all detected concentrations being below applicable quality criteria. Follow-up sampling at SV-2 has been proposed in order to rule out a release of larger magnitude.

AOC 4: Former 4,000-Gallon UST

The 4,000-gallon UST was removed in January 1999 by Absolute Tank Removal. Two soil samples were collected from the bottom of tank grave and analyzed for TPH. Although the results were below applicable quality criteria, the sampling and analytical program was not consistent with CTDEP guidance for UST closures. Five borings were drilled under the supervision of LBG in the area of the former UST in January 2006. Four of the borings were intended to be at locations representative of the sides of the former tank grave. The fifth boring was drilled at a location believed to be at the location of the former UST. One soil sample was collected from each boring and analyzed for

PHASE I ESA

PHASE II SI

Site Name: 141 Danbury Road
Location: 141 Danbury Road, Wilton, CT
Date: March 2006
Initialed: 

**ADDENDUM FOR ECAF
141 DANBURY ROAD
WILTON, CONNECTICUT**

ETPH and SVOC PAH only. The sample with the highest concentration of ETPH and SVOCs was also analyzed for VOCs. The results of the investigation of this AOC indicated that the soil on the north side of the tank grave contained residual concentrations of one SVOC and ETPH that exceed applicable quality criteria. Follow-up sampling has been proposed in the area north of the tank grave in order to determine the extent of impacted soil that is subject to remediation.

AOC 5: Former Septic System and Dry Wells

A septic system was utilized at the property until 1978 at which time the facility was connected to the sanitary sewer. The septic tank and some soil were removed in 1990. Soil borings were drilled under the supervision of LBG in January 2006 in order to assess potential residual impacts associated with the former septic system. These borings were located to be close to the location of the former septic tank and two connected drywells. The soil samples were analyzed for VOCs, SVOC PAH(only) and ETPH. The only target parameter detected was ETPH in one of the samples at a concentration well below applicable criteria. Further investigation/remediation at this AOC is not anticipated.

AOC 6: Concrete Pads

Two concrete pads are present on the north side of the building; one formerly used for an emergency generator and the other used for a transformer. Shallow soil samples were collected by LBG in January 2006 around each of the pads and analyzed to check for releases of petroleum fuel in the case of the former emergency generator pad and for PCBs in the case of the transformer pad. The soil from around the former generator pad was analyzed for SVOCs and ETPH and was found to contain low concentrations of one SVOC and ETPH. Further investigation/remediation is not anticipated around the former emergency generator pad. The soil from around the transformer pad was analyzed for PCBs and two samples were found to contain PCB concentrations (by mass analysis) that exceeded the GA Pollutant Mobility Criteria (PMC). Collection of follow-up samples from around the transformer pad and analysis for PCBs using SPLP has been proposed in order to better assess compliance with the GAPMC.

Part III.4 Describe the land use on the site and in the area surrounding the site.
Identify any sensitive land uses within 1/2 mile of the site?

Development on the Site consists of a two-story, split-level, commercial building and paved parking areas. The building has a footprint and a total useable area of approximately 33,648 and 47,040 square feet (sq ft), respectively, is centrally located on the eastern portion of the Site and is irregular in shape, with the long dimension oriented in an east to west direction. Paved parking areas are present on the west and south sides of the building. Maintained lawn is present on the north and east sides of the building. A small wooded area is present on the northwest corner of the Site.

The Site is irregular in shape with the long axis of the property oriented in an east to west direction. The eastern property line extends about 380 feet along Danbury Road, and the western property line extends approximately 300 feet along the Norwalk River.

The building on the Site is currently vacant. It contains open work areas, offices, closets, mechanical rooms, an elevator, a computer room, a kitchen, restrooms and a loading dock. Most of the floors in the building are carpeted, while the remaining floors are surfaced with either linoleum, ceramic tile, vinyl flooring or bare concrete. Most of the ceilings in the building consist of drop acoustical tile with fluorescent lighting. The remaining ceilings within the building consist of either sheet rock or exposed steel beams. The interior walls in the building consist of sheetrock and cinder block.

The building is constructed of steel beams and cinder block walls on a concrete slab foundation. The roof is a flat roof that is surfaced with a rubber membrane. HVAC equipment is located on the roof along with roof drains. The outlet of the roof drains is unknown.

The paved parking area on the Site currently is used by Enterprise Car Rental for the temporary storage of rental automobiles. All of the automobiles appear to be less than three years old and, therefore, have little potential of impacting the Site due to leakage of oil or other automobile fluids.

The warehouse building on the adjacent property to the north is occupied by MFP Technology Services. MFP Technology Services is a wholesale distributor of computer products. The residential buildings on the adjacent property to the east, across Danbury Road, are collectively known as Wilton Hills Condominiums. The large commercial building on the adjacent property to the south is occupied by Tracey Locke and Enterprise Car Rental. Tracey Locke is a marketing firm. The adjacent property to the west of the Site, across the Norwalk River, consists of a former gravel pit that has since been filled with ground water and surface water from the Norwalk River.

A Connecticut Department of Transportation salt storage is located north of the Site, near the intersection of Danbury and Wilton-Westport Roads. The salt/sand pile is currently stored within a covered shed. In years past, the salt/sand pile was not covered.

WILTON, CONNECTICUT**

There are no apparent sensitive human land uses within ½ mile of the site. The Norwalk River along the west side of the property represents a natural resource that should be considered relative to investigative/remedial activities that are conducted on the property.

Part III.5 Provide a brief geologic and hydrogeologic summary of the site and surrounding area:

Geologic Conditions

The overburden soils on the Site are mapped as stratified drift that has a saturated thickness of 90 feet.

Bedrock at the Site is mapped as light colored, foliated, granitic gneiss (Rodgers, 1985). Bedrock outcrops were not observed on the Site.

Surface Water and Ground Water Characteristics

The Norwalk River flows from north to south along the western property boundary of the Site. The Norwalk River is a tributary to Long Island Sound and has a water quality classification of "B". A "B" classification designates surface water that may not be meeting water quality criteria for one or more designated uses (CTDEP, 1997).

Ground water beneath the Site has a quality classification of "GA". A "GA" classification is assigned to ground water which is tributary to public water supply watersheds or within the area of influence of water supply wells. The ground water is presumed suitable for direct human consumption without the need for treatment. The State's goal is to maintain the drinking water quality of GA areas (CTDEP, 1997). Based on information provided in historic environmental reports for the site, ground water on the Site is located at a depth ranging from 3 to 14 ft bg (feet below grade). Based on the topography of the Site and surrounding area, and the proximity of the Site to the Norwalk River, the general direction of ground-water flow is estimated to be from the northeast to the southwest. This flow direction has been confirmed by ground-water monitoring.

Part IV.3 a. How many samples of ground water and how many rounds of sampling were used in the investigation?

Eleven (11) rounds of ground water sampling were completed. Ten (10) rounds were completed by GZA and one (1) round was completed by LBG on January 13, 2006. A total of 79 ground water samples were collected (68 were collected by GZA and 11 were collected by LBG) from the 11 on-site monitor wells.

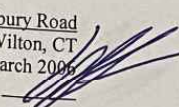

Part IV.3.b. How many monitoring wells were used to investigate the ground water? For each well list the well number, type of well, and geologic unit that the well is screened in or open to.

Eleven (11) monitor wells were used to investigate the ground water, please refer to the table below for details.

Well Completion Table

Well ID	Date Constructed	TOC Elevation ^{1/} (ft)	Type of Well	Geologic Unit for the Screen	Screen Setting (feet below grade)

Part V.1 Contaminated soil or Wastes on the Site – List the contaminant codes for substances detected in waste or soil on the site and for each contaminant the highest concentration detected: (Note where not applicable “NA” or not tested “NT”)

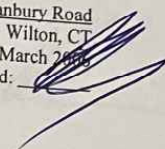

b. Soil:

The following maximum contaminant concentrations were found in the soil at the site based on both historic and current data.

PB	0.015 mg/l (TCLP)	Freon 113	88 ppb
CD	0.01 mg/l (TCLP)	Total 12DCE	14 ppb
CR	0.038 mg/l (TCLP)	CRY	0.35 ppm
Zn	0.13 mg/l (TCLP)	FLO	0.370 ppm
BA	0.37 mg/l (TCLP)	PYR	0.45 ppm
TPH	1,260	PCB 1260	0.02 ppm
TCE	12 ppb	BAA	0.26 ppm
PCE	13 ppb	BAP	0.23 ppm
ACT	4100 ppb	BBF	0.2 ppm
BKF	0.18 ppm	NPBZ	0.022 ppm
PHA	0.61 ppm	XYL	0.033 ppm
124TMB	0.20 ppm	PIPTL	0.011 ppm
135TMB	0.044 ppm	SBBZ	0.013 ppm
EBZ	0.015 ppm	ACE	0.300 ppm
NBB	0.031 ppm	2MNAP	1.3 ppm

Contaminant Codes

1,3,5-trimethylbenzene	135TMB	phenanthrene	PHA
1,2,4-trimethylbenzene	124TMB	ethylbenzene	EBZ
1,2-dichloroethene	12DCE	chrysene	CRY
n-butylbenzene	NBB	fluoranthene	FLO
lead	PB	pyrene	PYR
cadmium	CD	benzo(a)anthracene	BAA
chromium	CR	benzo(a)pyrene	BAP
barium	BA	benzo(b)fluoranthene	BBF
zinc	Zn	n-propylbenzene	NPBZ
acetone	ACT	p-isopropyltoluene	PIPTL
xylene	XYL	acenaphthene	ACE
ethylbenzene	EBZ	sec-butylbenzene	SBBZ
benzo(k)fluoranthene	BKF	2-methylnaphthalene	2MNAP

Site Name: 141 Danbury Road

Part V: 2.a Contaminated Ground Water Resulting from Releases on the Site – List the contaminant codes for substances detected in ground water and for each contaminant the highest concentration detected: (Note where not applicable “NA” or not “NT”)

111TCA	50 ug/l	MC	ND
PCE	ND	MEK	ND
11DCA	17 ug/l	NAP	19 ug/l
TCE	5.6 ug/l	Freon 213	ND
ACT	3,500 ug/l	Freon 113	190 ug/l
TL	ND	12DC112TFA	15 ug/l
XYL	19 ug/l		

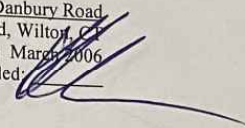

Contaminant Codes

1,1,1 Trichloroethane	111TCA	Toluene	TL
Tetrachloroethene	PCE	Xylenes	XYL
1,1 Dichloroethane	11DCA	Methylene Chloride	MC
Trichloroethene	TCE	2-Butanone	MEK
Acetone	ACT	Napthalene	NAP

Part V: 5. Briefly describe the extent and distribution of contaminated soil/waste, ground water, surface water and/or NAPLs resulting from releases on the site. If applicable, specify which contaminants are not subject to the certification to remediate releases at the establishment being transferred.

- Soil just above the water table and north of the former UST is impacted with ETPH and SVOCs. Areal extent is estimated at less than 800 square ft; sampling has been proposed to delineate extent.
- No other soil or ground water at property with non-compliant quality (soil immediately adjacent to transformer pad proposed for resample and analysis with SPLP to check for quality compliance for PCBs).

Part V: 6. List for each release area the codes for contaminants of concern, and for each contaminant the following: the number of samples in which the contaminant was detected; the maximum and typical concentrations of the contaminant; and depth at which the maximum concentration was detected:

RE: Hazardous Waste Manifest
Use of State-Assigned Waste Codes

Dear Sir/Madam:

The attached manifest is being returned to you because it has not been properly completed. Please provide the information specified below and return the corrected manifest(s) within 15 days to:

State of Connecticut Department of Environmental Protection
HAZARDOUS WASTE MANAGEMENT SECTION: MANIFEST PROGRAM
165 Capitol Avenue, Hartford, CT 06106

PROBLEM: A state-designated waste code was used under Item I "Waste No."
It is not clear whether this waste is also regulated under federal law (RCRA, 40 CFR Part 261, Subparts C & D).

- a. If the waste is a hazardous waste under both state and federal regulation, you should also fill in the applicable EPA Waste No. (from 40 CFR 261) under Item I, along with the other information specified in the instructions.
- b. If the waste is not a hazardous waste under federal law, write the words "NOT A RCRA-REGULATED HAZARDOUS WASTE" under the appropriate line in Item J.

Note that if you use a general DOT shipping name (under Item 11) which ends in "n.o.s." you must also provide a description of the material under Item J.

State Manifest Document Number(s):

MAA 007332

Please be sure to supply this information on all future manifests with state-assigned waste codes. Note that constant submittal of defective manifests may subject you to enforcement action. If you have any questions regarding this procedure, please contact Jeanne Brennan at (203) 566-8843.

Sincerely,

Stephen W. Hitchcock

WARNING LETTER

DATE: JAN 13 1987

RE: US DOT Description

Dear Sir/Madam:

We are returning the attached manifest(s) because it has not been properly completed. Please make the specified correction and return the original manifest to the following address within 15 days of receipt of this notice.

State of Connecticut DEP
HAZARDOUS WASTE MANAGEMENT SECTION
MANIFEST PROGRAM
165 Capitol Avenue, Hartford, CT 06106

Problem: The item in question is the #11 - US DOT Description. All of the following information must be entered: the correct US DOT shipping name for the waste, the corresponding DOT Hazard Class, and the 4 digit UN/NA ID Number. (This information can be found in the U.S. DOT regulations 49 CFR Parts 171-177). The word "waste" is required before or in the shipping name for all hazardous waste. (Example: Waste acetone, flammable liquid, UN 1090).

State Manifest Document Number(s):

MAA 007332 copy 2,7

Please be sure to fill in this area completely and accurately on all future manifests. Note that constant submittal of defective manifests may subject you to enforcement action. If you have any questions on this matter, please contact Maureen Benoit at (203) 566-8843 or 566-8844.

Sincerely,

Stephen W. Hitchcock

HAZARDOUS WASTE GENERATOR REPORT FOR 1985

This report is for the calendar year ending December 31, 1985

PAGE THREE:

SECTION XV. WASTE MINIMIZATION

A. GENERATOR'S EPA ID NO.: FCTD997536691

B. WASTE MINIMIZATION EFFORTS: Describe below:

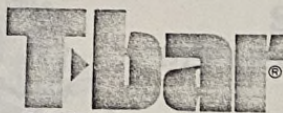

- 1) the efforts undertaken during 1985 to reduce the volume and toxicity of the hazardous waste which your business generates,
- 2) the change in your waste volume (amount of increase or decrease) from 1983,
- 3) and for any volume changes identified, indicate the reason for the change.

During 1985 the number of assemblies that we produce requiring chemical treatment significantly increased. Yet, we did not realize an increase in the volume or toxicity of the hazardous waste that we generate.

We are constantly looking for ways to decrease our volume of hazardous waste. To that end we hired an outside consulting firm (HRP Associates) in 1985 to review our operation and make recommendations on our chemical use and handling. Also, we frequently interface with the chemical company we purchase our chemicals from, always looking for better ways to treat our products with a net result in a lowering of the volume of waste.

We are committed to a clean environment and will continue to seek ways of reducing our volume and toxicity levels in the future.

Gentlemen:

In accordance with your letter of January 16, 1979; we have carefully inspected our manufacturing processes and chemical usage and have found that T-Bar Incorporated does not utilize or hold inventory for any of the designated carcinogens listed.

We will, of course, continue to monitor and inform you should our needs extend towards these substances.

Very truly yours,

RE: HAZARDOUS WASTE GENERATOR REPORT FOR 1985

Gentlemen:

Enclosed please find forms and instructions for completing the 1985 RCRA Generator Hazardous Waste Report. This report must be completed and submitted to the Hazardous Waste Management Section of the Connecticut Dept. of Environmental Protection on or before MARCH 1, 1986.

The information requested is required by both State and Federal law. Therefore, failure to submit the completed forms by this date will subject you to enforcement action. You have been sent this form because your operation notified EPA as a Generator of hazardous waste. Non-regulated establishments who have received a copy of this form must still file Page One of the report, even if a status change has already been requested.

One significant change from the 1983 Biennial Report is the waste minimization information reporting requirement. Refer to the instructions for details.

If you have any questions regarding this report form, please contact a member of the Hazardous Waste Management Section staff at 566-8843/8844.

Sincerely,

Edward C. Parker
Assistant Director
Hazardous Waste Management Section

P.O. Box T
Wilton, Conn. 06897

Attn: *Richard C. Hillente*

FROM: Department of Environmental Protection
165 Capitol Avenue
Hartford, Conn. 06106

SUBJECT: Life Expectancy of Underground Storage Tanks

Pursuant to subsection (h) of the DEP's regulations on Underground Storage Tanks, life expectancy is as follows:

FIBERGLASS REINFORCED PLASTIC - manufacturers' corrosion warranty period.

CATHODICALLY PROTECTED EXTERNALLY COATED STEEL - same as above or calculated anode life.

* Existing facilities not either of the above - 15 years from date of installation.

On your notification form, you indicated a longer life expectancy than provided for in the regulations. Unless you have documentation that indicates otherwise, I am changing your life expectancy(s) to 15 years for the tank I.D.'s listed below.

Sincerely yours,

Tank T-1
