All,

So to screen the ducts that are a different configuration than we anticipated, we devised two options:

Option 1 = we increased the width of the wood slot screening to cover the bottom of ducts protruding from the base of the condenser on right and then transitioned to a lap siding screening above the base screening.

Option 2 = we increased the width of the wood slot screening to cover the bottom of ducts protruding from the base of the condenser on right and then added another section of the wood slot screening above to screen the ducts entering the side of the building.

We tried to scale this as close as possible to how it would appear following installation of screening. Please let me know if I can answer any questions.

Patrick
